Applicant's or agent's file reference

International application No.

P018547WO

PCT/IB99/00065

International filing date (day/month/year)

06/01/1999

Priority date (day/month/year)

IMPORTANT NOTIFICATION

08/01/1998

Applicant

EVC TECHNOLOGY AG et al.

- 1. The applicant is hereby notified that this International Preliminary Examining Authority transmits herewith the international preliminary examination report and its annexes, if any, established on the international application.
- 2. A copy of the report and its annexes, if any, is being transmitted to the International Bureau for communication to all the elected Offices.
- 3. Where required by any of the elected Offices, the International Bureau will prepare an English translation of the report (but not of any annexes) and will transmit such translation to those Offices.

4. REMINDER

The applicant must enter the national phase before each elected Office by performing certain acts (filing translations and paying national fees) within 30 months from the priority date (or later in some Offices) (Article 39(1)) (see also the reminder sent by the International Bureau with Form PCT/IB/301).

Where a translation of the international application must be furnished to an elected Office, that translation must contain a translation of any annexes to the international preliminary examination report. It is the applicant's responsibility to prepare and furnish such translation directly to each elected Office concerned.

For further details on the applicable time limits and requirements of the elected Offices, see Volume II of the PCT Applicant's Guide.

see separate sheet

VII. Certain defects in the international application

The following defects in the form or contents of the international application have been noted:

see separate sheet

Re Item V

Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

1) Reference is made to the following document:

D1...GB-A-971 966

2) Document D1, which is considered to represent the closest prior art, discloses processes and catalysts for the synthesis of in particular 1,2-dichlororethane. The catalysts used comprised an alkaline earth metal and copper. The catalysts were prepared by a process which involved the impregnation of alumina with a solution(s) containing the copper and the alkaline earth metal (typically as chlorides; cf claims 1,5 and 12 and page 2, lines 3-7)). The initial alumina employed was activated alumina (gamma-alumina) which was heat treated (at 800 to 1400°C) prior to the impregnation with copper. In claims 2 and 3 of D1 it is specified that the alkaline earth metal is preferably magnesium and that the impregnation of the alumina with the alkaline earth metal may be performed before the heat treatment of the alumina. The catalyst produced in the example contained 1.1% magnesium, 4% copper and 4% cerium.

In a catalyst preparation according to D1 in which the alumina is impregnated with magnesium prior to the heat treatment, the heat treatment will have to be followed by the copper impregnation. The heat treatment in D1 since it is performed at high temperatures appears to serve the primary purpose of converting the initial gamma-alumina to an alumina which contains a significant proportion of alphaalumina. This heat treatment will however clearly also dry the magnesium impregnated alumina. This is all that is required in present claim 1. There is no requirement derivable from claim 1 that the alumina must be subject to a low temperature drying or remain as gamma-alumina.

Thus this type of process as disclosed in D1 is novelty destroying for the catalyst preparation process of present claims 1 and 2, the catalyst produced by this process as defined in claim 3 and the gas phase oxychlorination as defined in claim 9 (Article 33(2) PCT).

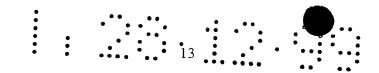

EXAMINATION REPORT - SEPARATE SHEET

3) The remaining claims 4-8 are not considered to involve an inventive step (Article 33(3) PCT). These claims either define well known compositions for oxychlorination catalysts or forms of gamma-alumina which a skilled person would readily recognise as being suitable starting materials for the process of document D1.

Re Item VII

Certain defects in the international application

- 1) Contrary to the requirements of Rule 5.1(a)(ii) PCT, the relevant background art disclosed in the document D1 is not mentioned in the description, nor is this document identified therein.
- 2) The description is not in conformity with the claims as required by Rule 5.1(a)(iii) PCT.

CLAIMS

- A process for preparing a catalyst which comprises impregnating
 γ-alumina with a solution containing a magnesium salt, drying the product, and impregnating the product with a solution containing a copper salt and, optionally, a lithium salt.
- 2. A process as claimed in claim 1 wherein the salts are the chloride $10\,$ salts.
 - 3. A catalyst produced by the process of claim 1 or 2.
- 4. A catalyst as claimed in claim 3 containing, by weight, 15 from 0.1 to 5% magnesium, from 2 to 10% copper, and from 0 to 5% lithium.
 - 5. A catalyst as claimed in claim 4 containing, by weight, from 0.1 to 2% magnesium, from 2 to 8% copper, and from 0 to 1% lithium.
- 20 6. A catalyst as claimed in claim 5 containing, by weight, 0.5 to 1.5% magnesium, from 3 to 6% copper, and from 0.1 to 0.3% lithium.
- 7. A catalyst as claimed in any of claims 3 to 6 wherein the γ -alumina has a surface area of from 50 to 220 m²/g and an average particle size in 25 the range 40 to 60 μm .
 - 8. A catalyst as claimed in claim 7 wherein the $\gamma\text{-alumina}$ has a surface area of from 80 to $180m^2/g$.
- 30 9. A process for the catalytic gas phase oxychlorination of ethylene which comprises reacting ethylene, hydrogen chloride and a source of oxygen in the presence of a catalyst as claimed in any of claims 3 to 8.

Before the expiration of the time limit for amending the claims and to be republished in the event of the receipt of amendments.

(54) Title: CATALYST, PROCESS FOR ITS PREPARATION, AND ITS USE IN THE SYNTHESIS OF 1,2-DICHLOROETHANE

(57) Abstract

A catalyst for the oxychlorination of ethylene to 1,2-dichloroethane is prepared by impregnating a γ -alumina support with a magnesium salt, drying the product, and impregnating the product with a copper salt, preferably together with a lithium salt. The catalyst preferably contains 0.1 to 5 % magnesium, 2 to 10 % copper and 0 to 5 % lithium, by weight, and is particularly effective in oxygen-based processes.
